# Environmental problems in oasis towns: Dust weather & urban heat stress

## Aims

1. To inform local planners, managers, decision-makers
2. To apply, adapt & evaluate Bayesian Networks for transdisciplinary knowledge integration

## Model purpose

- To identify plant/tree species that are most effective to mitigate dust weather and urban heat stress while requiring the least irrigation
- Management options (root nodes): Increase/decrease extent of vegetation; 17 plant species in urban/peri-urban areas

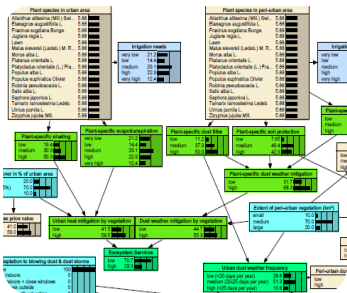

# Research plan

2011: Expert interviews in Aksu, Korla & Beijing  
2012: Expert interviews in Germany & Aksu,  
First Workshop in Urumqi

2013: Expert interviews in Germany  
Second Workshop in Korla

2014: Third Workshop in Korla

## Interviews and Workshop 2011/2012

### Interview partners in 2011/2012

- Aksu Environment Protection Bureau
- Aksu Urban Greening Committee
- Aksu Forestry Bureau
- Aksu Agriculture Bureau
- Aksu Urban Construction Bureau (Urban Vegetation dept.)
- Korla Urban Greening Bureau
- China Center for Sustainable Development Research , Beijing
- College of Architecture and Landscape Architecture, Beijing University
- School of Public Health, Department of Toxicology, Beijing University

### Workshop participants, Urumqi 2012

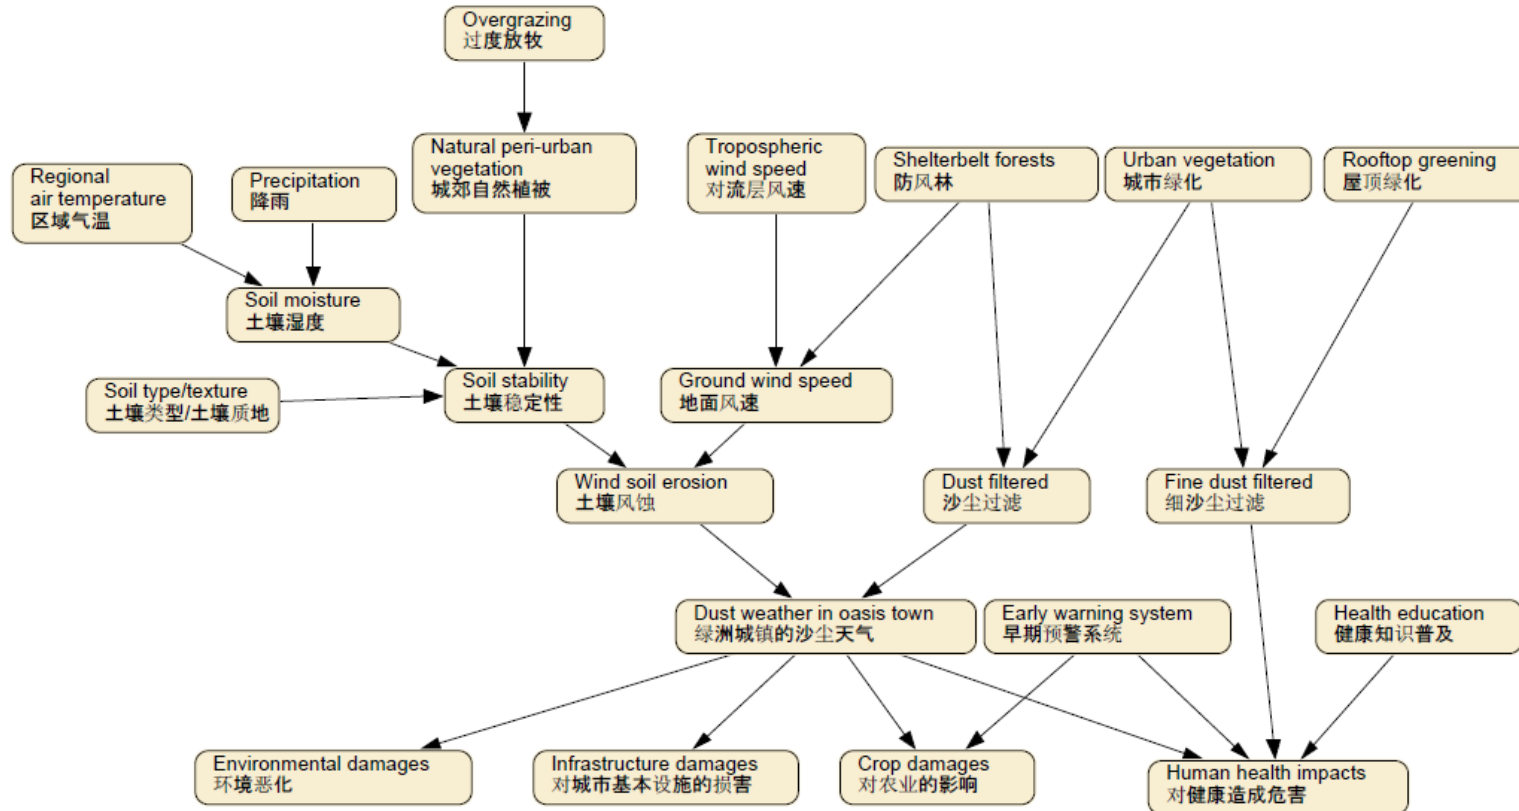

- Urumqi Urban Greening Committee
- Aksu Institute of Forestry Research
- Xinjiang Forestry Academy
- Xinjiang Bureau of Meteorology
- Xinjiang Agricultural University
- Xinjiang Academy of Social Sciences
- Xinjiang Normal University
- Xinjiang University

## First Workshop in Xinjiang (May 2012)

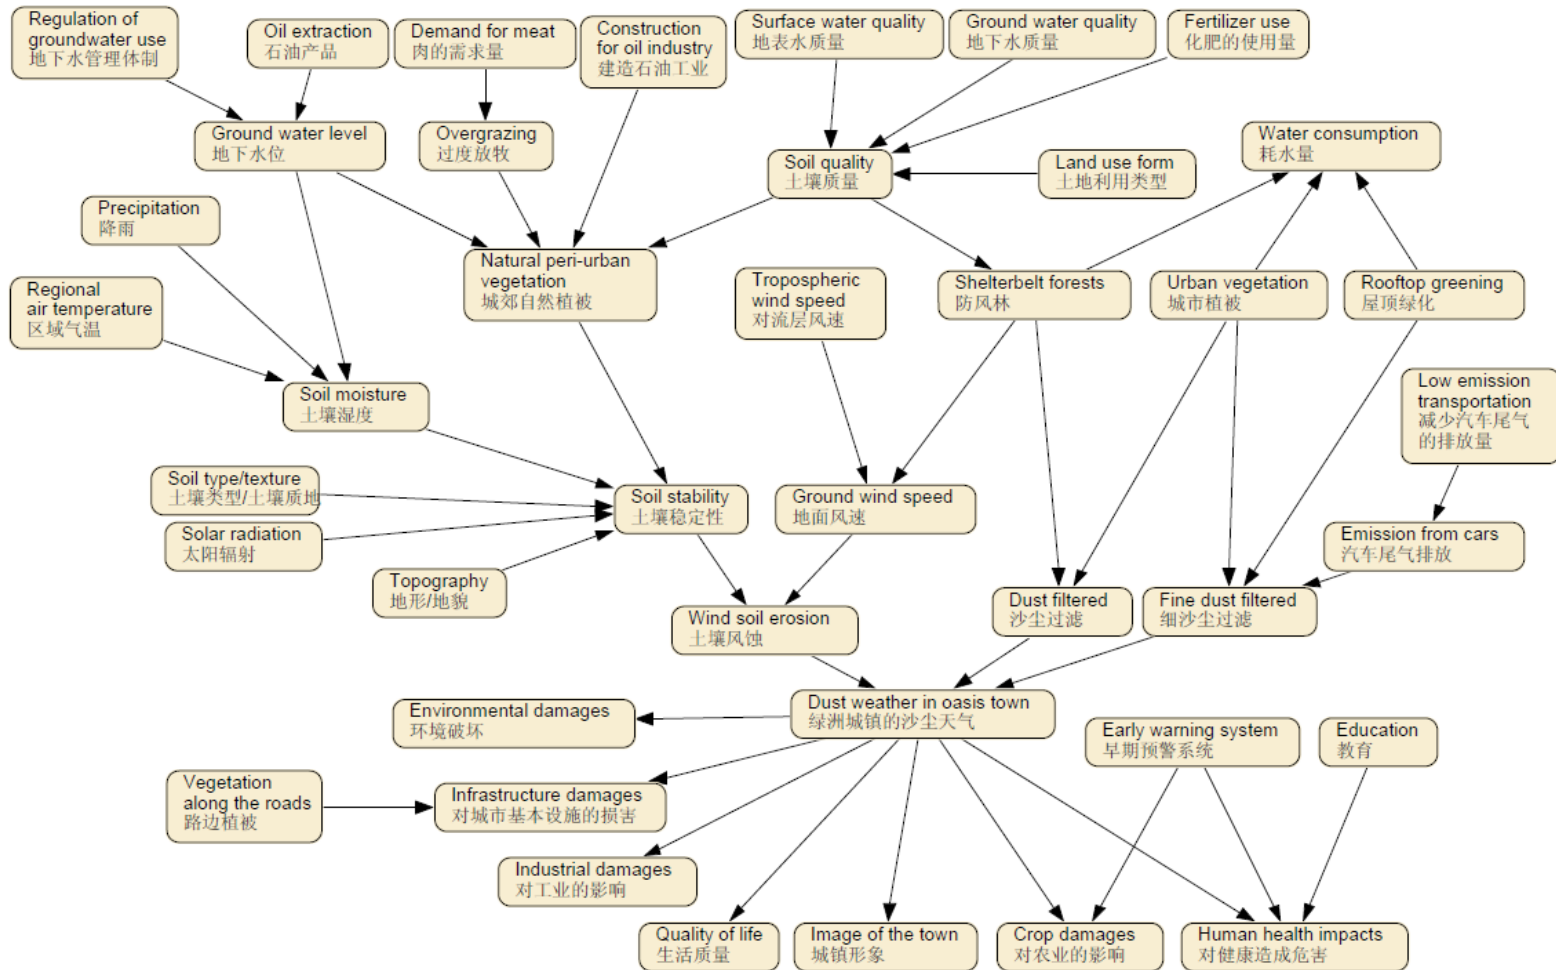

- Chinese scientists and institutional stakeholders discussed and improved causal network structure (plus questionnaire & workshop evaluation)
- BNs are very visual & easily facilitate discussions (19 new nodes added to preliminary BN during a 1hr discussion)

# Causal network before Workshop 1

# Causal network after Workshop 1

Plant species in urban area	
Alanthus altissima (Mill.) Sw...	5.88

## Second Workshop in Xinjiang (March 2013)

### Second Workshop

- Bayesian networks require conditional probability tables – however it was easier for workshop participants to express their knowledge in other units (0-1, - to +++)
- Experts' knowledge on urban and peri-urban vegetation elicited (combination of CPTs and other tables) – always including confidence

		Irrigation needs (between 0 - 1) 1 highest need 0 lowest need	Soil stability Very high +++ high ++ rather high + low -	Wind protection Very high +++ high ++ rather high + low -	Dust filter Very high +++ high ++ rather high + low -
--	--	--	--	---	---

1	臭椿 <i>Ailanthus altissima</i> (M. Swing. (Götterbaum)) 			Irrigation needs (between 0 - 1) 1 highest need 0 lowest need	Shading by canopy Very high +++ high ++ rather high + low -
---	--	--	--	--	---

2	沙枣 <i>Elaeagnus argentea</i> (Schmalblättriger Sanddorn) 	小叶白蜡 <i>Fraxinus sogdiana</i> Bunge. (Fluß-Esche) 			Potential to improve shading very high +++ high ++ rather high + low -
---	--	--	--	--	--

3	核桃 <i>Juglans regia</i> 	核桃 <i>Juglans regia</i> 	Arcades

How confident are you with your estimates?

very confident     rather unconfident

rather confident     very unconfident

Workshop 2: Selection of tables used to elicit experts' knowledge

# Conversion of expert knowledge into conditional probability tables (CPTs)

1. Calculation of weighted average (incl. confidence) for 3 expert groups
2. Conversion into conditional probability tables
  - Values 0-1
  - Values 0-3 (– to +++)
  - Hierarchical ranking (bringing combinations of states into a hierarchy from most favorable to least favourable according to literature & expert opinion)

# 沙尘天气管理的贝叶斯网络:加权平均数

		Irrigation needs  (between 0 - 1) 1 highest need 0 lowest need	Soil stability  Very high +++ (3) high ++ (2) rather high + (1) low - (0)	Wind protection  Very high +++ (3) high ++ (2) rather high + (1) low - (0)	Dust filter  Very high +++ (3) high ++ (2) rather high + (1) low - (0)
1	臭椿 <i>Ailanthus altissima</i> (M.) Swing. 	0.23	1.43	1.38	1.75
2	沙枣 <i>Elaeagnus angustifolia</i> L. 	0.13	2.43	2.63	2.38
3	核桃 <i>Juglans regia</i> L. 	0.57	1.71	2	2.13

# CPT conversion for values 0-3 (for nodes with 3 states), less and more confidence in experts' estimates

less confident

	low (0-1.0)	medium (1.1-2.0)	high (2.1-3)
0-1.0	80	15	5
1.1-2.0	10	80	10
2.1-3	5	15	80

more confident

	low (0-1.0)	medium (1.1-2.0)	high (2.1-3)
0-1.0	90	10	0
1.1-2.0	5	90	5
2.1-3	0	10	90

## To do

- Bayesian Networks/Bayesian Decision Networks need to be tested and evaluated
  - Formal model evaluation by experts (December 2013)
  - Add provisioning services to the BN
- Preparations for third workshop (March 2014)

**Thank you!**
